# Performance *Curve*

EVENT FIT REVIEW

STRONGEST DISTANCE

3200m

Event Fit Confirmed

Kally's strongest performance is at 3200m (18.5% above predicted from their other PRs). This is in the same family (Middle) as their stated primary event (1600m). The race profile and the event assignment are aligned.

RECOMMENDATION

Train the primary event with confidence. If they have additional range at 3200m, consider it as a secondary or development event.

► VIEW EVIDENCE (PER-EVENT PERFORMANCE VS PREDICTION)

**How this works:** Each of Kally's logged race times is compared to what would be predicted from their **1600m anchor (5:09.0)**. If a time is faster than predicted, that event is a relative strength. If slower, it's a development opportunity. Differences within ±1.5% are considered balanced.

| EVENT COMPARISON |         | PREDICTED VS ACTUAL |                 |         |
|------------------|---------|---------------------|-----------------|---------|
| EVENT            | ACTUAL  | PREDICTED           | DIFFERENCE      | VERDICT |
| 800m             | 2:50.0  | 2:28.2              | -21.8s (-14.7%) | GAP     |
| 3200m            | 10:02.0 | 10:44.2             | +42.2s (+6.6%)  | STRONG  |

Strength = actual time is >1.5% faster than forecast · Balanced = within ±1.5% · Development = >1.5% slower than forecast

ATHLETE PROFILE SUMMARY

TRAINING IMPLICATIONS

PROFILE TYPE

STRENGTHS

TO DEVELOP

ENDURANCE-BIASED

1

1

Kally is stronger at longer distances than their 1600m anchor would predict. Speed development (short reps, hill sprints, plyometrics, max velocity exposure) would unlock more potential. Their aerobic engine is an asset — leverage it for race specificity work.

▲ **Important context:** Comparisons assume each PR was set with equivalent training specificity. If your athlete trained primarily for one event, their times at neglected distances will look "weak" by this analysis even if their true potential is high there. Use this as a starting hypothesis for the coach's eye, not as definitive verdict.
